Hyd student visits the Land of Rising Sun

Manideep was one of three students to be selected for the JENESYS 2.0 programme.

Ministry of Foreign Affairs of the Government of Japan presented the programme from the standpoint of providing a sound foundation for strong solidarity within Asia through large-scale youth exchange. The programme is being conducted in cooperation with various local governments, schools, and international exchange organisations in each area covering.

Manideep, while talking to the Young Hans, said, "I visited tourist places in Tokyo, I had interaction with the other students and participated in the cultural and science programmes. I was invited as a guest by Keiko Shibata's family, where I had nice Japanese food and interacted with the family members and learnt a little Japanese. I visited the National Museum of Emerging Science and Innovation (Odaiba). It is a place where I understood the things happening in our world today from a scientific point of view."

While exchanging opinions and ideas with science communicators, visitors can experience the technological progress of today, from simple day-to-day questions to the latest technologies, the global environment, and space explorations.

I saw many robots and scientific equipment. The humanoid robot ASIMO was a marvel. Its ease of operability is actualised through its size, weight, and mobility. ASIMO currently works as a science communicator of Odaiba," he added.
